

## Description MB832:

**Base details:** The structural steel orange powder coated frame is made of 2 X 3" structural steel with heavy 16" X 10.5" 4-bolt base plate powder. The pivot assembly consists of a stainless-steel nut and bolt paired with no-maintenance composite bushings. Steel counterweights are provided in large and small sizes that are field adjustable on the swing arm with the mounting holes the length of the arm. The base plate can be bolted to solid surfaces including concrete foundation, or heavy steel plate or other precast concrete portable design. Arm may be locked in the up or down position with a medium size padlock at the base. Padlock compartment is bolt cutter resistant. Pivot Swing arm may be customized for small areas but requires special build by Upswung.

### Aluminum arm

The arm is 3.1" diameter heavy extruded aluminum tube powder coated bright white.

The arm may be cut in the field but will likely require a call in for weight adjustments. DOT reflective tape provided.

No arm support is required for arm lengths less 18ft.
